Trim & Tone Gel  
The perfect  
at-home  
product for  
toning and  
firming the skin

Trim & Tone Gel stimulates cell circulation to invigorate and tone the skin. The topical treatment powerfully blends vasodilators to smooth lipidic accumulation, and contains antioxidants to support circulation and repair free-radical damage. Trim & Tone Gel also includes microbeads that carry Vitamin C to promote skin firming, and Coenzyme A to aid in metabolism and increase energy.

For best results, use acid-free BelleDerm Enzyme Exfoliator once every other day before applying Trim & Tone Gel.

**AWT™**  
ACOUSTIC WAVE THERAPY™

A painless, non-invasive  
treatment to improve the  
appearance of cellulite

“My patients have seen dramatic results from Acoustic Wave Therapy. Women who have tried everything – from diet and exercise to various over-the-counter remedies – have seen results for the first time from AWT. I’ve literally had patients come into my office with tears in their eyes to thank me for introducing them to this treatment.”

—BILL JOHNSON, M.D.  
Grapevine, Texas

# Wear shorts, skirts and swimsuits with confidence again!

Cellulite is a nagging problem for many women, even those who work hard to keep fit. The reason is that cellulite is not a fat problem – it's a skin problem. Cellulite is made up of fat cells that reside within the skin. They can't be burned as fuel, so dieting and exercise won't eliminate them.

Now, through Acoustic Wave Therapy™ (AWT™), women can achieve firmer, smoother skin in the areas where cellulite forms – the thighs, buttocks and abdomen.

After 4 treatments

## Acoustic Wave Therapy™ How it works...

AWT mechanically vibrates connective tissue in affected areas of the body, improving the skin's appearance.

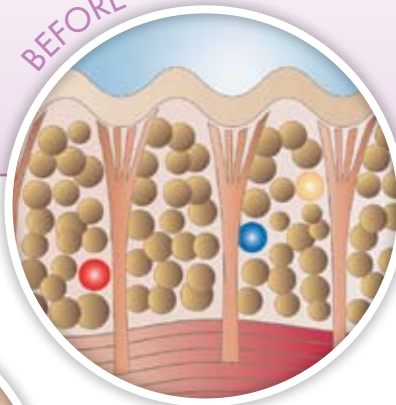

Enlarged fat cells push the skin up and compress the circulatory system, reducing inflow of nutrients and outflow of waste products. Diminished exchanges in circulation lead to a gradual stiffening of the connective tissue, pulling down on the skin. The push/pull effect creates the appearance of cellulite.

The mechanical action of AWT:

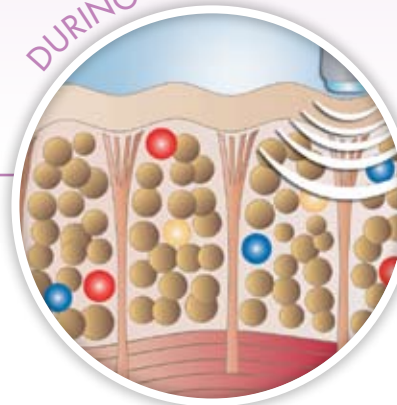

- Disrupts the connective tissue to firm and smooth the skin.
- Causes neo-vascularization, improving circulatory exchanges (the root cause of the problem).
- Initiates an inflammatory process in the skin, leading to thicker, more elastic skin through collagen production.

The elasticity of the connective tissue is restored and the skin is smoother. The skin is thicker and more elastic with noticeable improvement to the skin's texture.

## AWT Treatment and Results

Patients are typically treated twice per week for three weeks; the therapy is painless and requires less than a half hour per session. Talk with your doctor or aesthetician today to view before-and-after photos of actual AWT patients. You'll be amazed at what AWT can do for you!
